Research Interests:

- Speech Understanding

- Spoken Dialogue Systems
- Information Extraction from Spontaneous Speech
- Integrating Natural Language Processing with Speech Decoding
- Pronunciation Modeling
- Stochastic Modeling
- Computational Semantics

From 1986-1998 I was research faculty in the Speech group at Carnegie Mellon University. While there, I developed the Phoenix system for robust semantic parsing of spontaneous speech. In 1998 I co-founded the Center for Spoken Language Research at the University of Colorado. In 2007, CSLR reorganized as Computational Language and Education Research, where I am currently a Research Professor. In 2007, Ron Cole and I started Boulder Language Technologies. I am currently a Principal Research Scientist at BLT.
